

Project - Deep Learning CS577

-
- Title: License Plate Detection and Recognition System
 - Authors: Cheng Long Wu Yang & Victor Bóveda Prado
-

Index

1. Input vehicle image (RGB)
2. License Plate Detection
 - Convert RGB to HSV
 - Morphology filtering to contrast maximization
 - Gaussian Blur Filter
 - Adpatative threshold
 - Finding all contours
 - Geometric filtering
 - CNN license plate detection
 - Boundary box of license plate
3. License Plate Segmentation
 - Definition of functions needed for plate segmentation
 - Segment characters
4. Character/Number Recognition
5. Testing

```

```

RUN MODE

Set this variable to True if you want to train the model without using the weights. Set to False if you upload the models' weights

- lp-detection.h5
- lp-recognition.h5

In [3]: TRAINING_MODE = True

Load the different datasets

In order to deploy this wiouth google drive. The following files must be uploaded:

- lp-test-base.zip
- lp-detection.zip
- lp-alphanumeric.zip

In [22]:

```
# In this section there are the code in order to unzip the datasets of the
train_dir      = 'train'

4.Character/Number Recognition

The final stage in our system is the character recognition. There are currently a lot of techniques applied to the character and number recognition, such as the syntactic, the statistical and neural networks. In our system, to recognize the characters on an LP, the Tensorflow framework will be reused to classify the characters with a second CNN model with 37 classes. For training, 36 entry classes (10 classes of digits (0 to 9) and 26 upper case characters (A..Z)) and another non-character class are considered. The configuration of the CNN model is presented in Table I

TABLE I. CONFIGURATION OF CNN MODEL FOR CHARACTER RECOGNITION

Layer Type	Parameters
